IPA Solutions
Discover the Power of Intelligent Process Automation

"Intelligent Process Automation (IPA) can automate 50 to 70 percent of tasks, a reduction in straight-through process time of 50 to 60 percent"

McKinsey* believes that IPA, which includes RPA, will be a core part of companies' next-generation operating models, combining rule-based automation with decision-making capabilities thanks to advances in deep learning and cognitive technology.

Ready to adopt IPA?

Intelligent Process Automation combines Robotic Process Automation (RPA) with Artificial Intelligence (AI) and Machine Learning (ML) to streamline and enhance business processes that typically required human cognition. It also uses some of the cognitive technologies such as OCR, NLP etc., helping businesses automate complex, high-volume, and repetitive tasks. This powerful combination allows organizations reduce cost, increase productivity, make data-driven decisions, and improve overall performance.
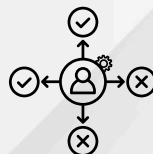

What can automation do for you?

Assigning your mechanical, high volume & repetitive work to a digital operator

Improve customer experience with quicker TAT

Increase capacity by 35–50%

Makes decision based on set rules

Eliminate costly errors

What can Software Robots do?

✓ **Data Entry -** IPA BOTs can input data into forms, databases, spreadsheets, or any other software application just like a human would.

✓ **Automated responses -** BOTs can be designed to mimic human conversation through text or voice interactions.

✓ **Move file and folders** - Organize and manage digital assets by automating the movement, copying, and organization of files and folders.

✓ **Scrape Data from the Web** - Extract valuable data from websites, PDFs, emails, and online forms automatically helping to gather insights and information without manual intervention.

✓ **Log in to application** - Automate the login process across multiple applications, ensuring secure and efficient access to systems.

✓ **Make calculations** - Perform complex calculations quickly and accurately, ensuring precise data handling and analysis.

These capabilities allow software robots to significantly enhance productivity, accuracy, and efficiency within an organization.

Key Business Units Ideal for Automation

Finance **Data Management** **Customer Service** **Human Resource** **Sales & Marketing** **IT**

Our Commitment to Your Success

At Alletec, we are dedicated to delivering cutting-edge IPA solutions tailored to your business needs. Our team of experts will work with you every step of the way to ensure seamless implementation and continuous improvement of your automated processes. Our team helps you with:

- Consulting services and solutioning
- Implementation / Professional services
- Training and Support
