

XtendedWMS

Your Swift and Impeccable Solution for Inbound and Outbound Warehouse Operations

Alletec presents a power-packed **XtendedWMS**, designed to improve your control over inventory by automating and optimizing stock management processes.

Our simple and intelligent warehouse management system is specially programmed for businesses running on a Microsoft D365 Business Central/NAV-based system and is suitable for both small and large enterprises.

Alletec **XtendedWMS** works directly and on the top of the Warehouse Management Module of Microsoft D365 BC/NAV. It eliminates the need of maintaining a middleware system, and hence...

- The information scanned on **XtendedWMS** is posted to D365 Business Central/NAV in real-time.
- The need for Inventory reconciliation is eliminated.
- D365 BC/NAV remains to be the primary system for holding Inventory.
- Ultimate control of warehouse users remains within D365 Business Central/NAV as the warehouse operation requests originate from and end in D365 BC/NAV.
